

## **Creating an Interactive Graphic- Screencast Transcription**

This interactive graphic was sourced from the Wikicommons repository and as I created it, I tried to use a diverse number of different media for the more complex parts of the bird. I included graphics that detailed more of the small pieces and the questions posited to the students involved comparison to the human anatomy most of the pieces here features definitions that relate directly to the human skeleton, but I tried to show as much as possible the differentiations. At a suggestion from one of my peers I also incorporated one more new piece (a diagram) into the metatarsal zone so the students could see the significant differences where the bone structures got overly complex.
